

Concerned about the quality of your well water? Does it contain arsenic? Radon? Why does it smell like rotten eggs? Take advantage of water testing day in New Boston.

Water Test Day September 10th

Nelson Analytical is a state accredited laboratory for water testing. Regular testing of well water is the first step in ensuring the quality of the drinking water and the health of the residents. Residents who have private wells as their water supply are solely responsible for the testing of their water supply, and any necessary corrective treatment.

The benefits of participating in the Town Water Test Day are a special savings of **20%** and free lab pick-up service, saving residents from driving samples to Manchester. Turnaround time for test results emailed to customers is normally 2 to 3 business days.

Test kits are available for pick up at the Town Hall now. Water needs to be collected and dropped off on **September 10th no later than 6:30PM**

Price lists are available at the Town Hall, on the Town Website or by [clicking here](#).
